# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

## TREND SUMMARY

Manufacturers' January shipments, estimated at \$3,016 million were 4.1 per cent seasonally down from \$3,146 million in December, but 6.4 per cent up from the estimate for January 1967. New orders received during January dropped 1.7 per cent, while unfilled orders at the end of the month rose 2.3 per cent from the previous month. Seasonally adjusted, January manufacturing shipments rose 1.1 per cent, a noticeable increase for the third consecutive month. Seasonally adjusted new orders and unfilled orders for January, however, showed declines of 3.0 per cent and 1.5 per cent respectively. Total inventory held at the end of January decreased slightly by 0.2 per cent from the end of December, and was fractionally off after seasonal adjustment with the small increases in raw materials and goods in process more than offset by a 0.8 per cent drop in finished products.

January shipments of durable and non-durable goods were lower than December by 6.1 per cent and 2.4 per cent but higher than January of last year by 7.9 per cent and 5.2 per cent respectively. Most major industry groups reported decreases in January shipments from December, mainly seasonal in nature. About 43 per cent of the overall decrease in manufacturers' shipments was attributable to the transportation equipment industry group which showed a drop of \$56 million, mainly seasonal, from its record high in December. Relatively speaking, the largest decline in January shipments was reported by the tobacco industries (-23.4 per cent). The clothing industries, on the other hand, reported a significant seasonal increase of 15.2 per cent from the year's low in December. Compared with the same month in 1967, more substantial gains in January shipments by major industry groups were recorded in knitting mills (25.6 per cent), clothing (11.0 per cent), primary metal (12.5 per cent), transportation equipment (17.3 per cent) and petroleum and coal products (16.7 per cent).

New orders received by durable goods producers during January remained at about the same level as in December, while new orders for non-durable goods decreased by 3.0 per cent. The backlog of unfilled orders for durable goods manufacturers reached \$3.304 million at the end of January, 2.5 per cent higher than a month earlier, but 1.1 per cent below the level at the end of January 1967.

Total inventory owned by manufacturing industries in January was 0.3 per cent lower than in December. The larger portion of the decrease occurred in non-durable goods industries. More prominent declines were registered in the foods and beverages industries (-2.3 per cent) and the primary metal industries (-3.7 per cent), and a marked increase was shown in the tobacco industries (7.6 per cent). The changes largely reflected seasonal variations in raw materials.

In January, the ratios of manufacturers' owned inventories to shipments and finished products to shipments were seasonally up to 2.22 and 0.81 from 2.13 and 0.77 respectively in December, but lower than the ratios in January last year. Both ratios, based on the seasonally adjusted estimates, decreased for the third consecutive month since last November to 2.04 and 0.75.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

## CONCEPTS AND SOURCES

The monthly bulletin of manufacturers' shipments, inventories and orders publishes values of monthly shipments and inventories and unfilled orders on the books at the end of the month estimated on the basis of the latest census of manufactures by monthly returns from representative establishments in each industry. The December 1966 bulletin is the first issue in which the census base of 1964 is used. Values for 1962, 1963 and 1964 are derived directly from each annual census; values for 1965 and 1966 are projected from the 1964 census. The aggregate monthly shipments for each year which is based directly on a census should equal published census values. The year end inventory values published here are for December and thus will differ from the year end census values to the extent which establishments have reported to the census on a fiscal year ending at a date other than December 31. Unfilled orders on books are published for industries where orders are part of the accounting record.

The monthly survey covers approximately 6,500 establishments. The survey accepts combinations of establishments within companies on a monthly basis to accommodate monthly accounting records and also accepts estimates of inventories and orders values if actual records are not available. Many establishments in several industries take inventory only annually and keep no record of orders as orders. The number of firms reporting actual inventory values is approximately two-thirds of the total reporting shipments; approximately one third report unfilled orders.

The monthly sample of establishments in the survey is revised annually in accordance with the census base and the list is kept constant between revisions. The identity of an establishment is also retained between revisions. This is done because, simply stated, the estimates are calculated by multiplying the sum of monthly reported values for each industry in each province by the ratio of the establishments in the sample to the census total for the same unit. Separate ratios are calculated for shipments, inventories and unfilled orders. If a report is not received in time for the monthly compilation an estimated value is written in. Since each month is published first as a preliminary value monthly returns are accepted up to the time the machine compilation is begun and late returns for the month will be used one month later in the revised estimate. Returns received after beginning the compilation for the next month (i.e. January returns received after the February compilation is begun) are not used in the estimates until the following annual revision.

Thus changes in the monthly series will arise from changes in the identity of establishments between censuses, and from the substitution of reported for estimated values.

The inventory values published are shown both for total inventory owned and total inventory held by an establishment. The difference between these values is the amount of inventory financed by progress payments as the work proceeds on goods being produced. Since some goods manufactured are held as in-progress inventory for a considerable time the book value of manufacturers' inventory may build up and, to the extent that this has been covered by the payment received, is higher than the manufacturers' investment in inventory. Both the amount of the manufacturers' investment in inventories and the amount of inventory held by manufacturers is of economic interest. It is also interesting to distinguish between inventory held by the degree of fabrication which has taken place. Consequently firms are asked to report their stocks by level of fabrication: raw materials and components; work in progress and finished products.

Unfilled orders cover orders received but not yet shipped, or treated as a sale, irrespective of work done on them or stocks from which they can be filled. Establishments in many industries do not maintain order books but fill orders as they are received from stocks. Most establishments which do maintain order books strike a value of unfilled orders on their books at the end of each accounting period. New orders received, although an estimate of considerable interest to economists as an indication of the rate at which new business is being received, is not often available from accounting records. Consequently the estimate for new orders published here is derived by industry, by province from the relationship between unfilled orders and shipments.

The definitions, classifications and groupings are taken from the census of manufactures.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

## TREND SUMMARY

At the preliminary estimates of \$2,946 million and \$2,907 million, manufacturers' shipments and new orders in February were 2.0 per cent and 6.4 per cent down from the revised estimates of \$3,008 million and \$3,105 million respectively in January. The value of unfilled orders, at \$3,751 million at the end of February, also dropped 1.0 per cent from the previous month and 1.6 per cent from February of last year. After the removal of trading-day and seasonal factors, manufacturers' February shipments declined significantly by 4.2 per cent following increases for the previous three months; new orders also fell substantially by 4.8 per cent continuing the drop from the record high in December. Unfilled orders, seasonally adjusted, receded again in February by 1.6 per cent. Manufacturers' total inventory holdings in February increases only moderately from \$7,061 million to \$7,097 million, and after seasonal adjustment, the value of inventories held was slightly down reflecting the drops in goods in process and finished products.

Manufacturing shipments of durable goods in February dropped \$69 million to \$1,300 million caused mainly by a 21.7 per cent set-back in the transportation equipment industry group. The drastic decrease in the transportation equipment industries in February in turn reflected largely the effects of labour disputes in the motor vehicle and parts and accessories industries (-30.9 per cent, -28.9 per cent). On the other hand, non-durable goods industries as a whole reported only a slight gain in February shipments; more sizable increases in the clothing, the leather and the miscellaneous industries were offset by decreases in the foods and beverages and the petroleum and coal products industries.

New orders received by durable goods manufacturers in February were substantially lower than that in the previous month with large reductions recorded in the transportation equipment industries and the primary metal industries. The backlogs of unfilled orders on the books of both durable and non-durable goods producers at the end of February were of 0.9 per cent and 2.1 per cent from the month earlier and 0.7 per cent and 7.3 per cent respectively lower than February of last year.

In February, both durable and non-durable goods industries reported small increases in owned inventories. Relatively large rises were shown in the major groups of tobacco, rubber, and wood products (8.5 per cent, 3.3 per cent 2.4 per cent), while decreases occurred in the foods and beverages and the primary metal industries (-1.4 per cent, -2.1 per cent).

The ratios of manufacturers' owned stocks to shipments and finished products to shipments, at 2.28 and 0.84 respectively in February, were slightly higher than in January but lower than February of last year. Seasonally adjusted estimate of owned inventories at the end of February, however, were equal to 2.13 time the value of shipments for the month, a significant increase from the month before (2.04).

# INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

## CONCEPTS AND SOURCES

The monthly bulletin of manufacturers' shipments, inventories and orders publishes values of monthly shipments and inventories and unfilled orders on the books at the end of the month estimated on the basis of the latest census of manufactures by monthly returns from representative establishments in each industry. The December 1966 bulletin is the first issue in which the census base of 1964 is used. Values for 1962, 1963 and 1964 are derived directly from each annual census; values for 1965 and 1966 are projected from the 1964 census. The aggregate monthly shipments for each year which is based directly on a census should equal published census values. The year end inventory values published here are for December and thus will differ from the year end census values to the extent which establishments have reported to the census on a fiscal year ending at a date other than December 31. Unfilled orders on books are published for industries where orders are part of the accounting record.

The monthly survey covers approximately 6,500 establishments. The survey accepts combinations of establishments within companies on a monthly basis to accommodate monthly accounting records and also accepts estimates of inventories and orders values if actual records are not available. Many establishments in several industries take inventory only annually and keep no record of orders as orders. The number of firms reporting actual inventory values is approximately two-thirds of the total reporting shipments; approximately one third report unfilled orders.

The monthly sample of establishments in the survey is revised annually in accordance with the census base and the list is kept constant between revisions. The identity of an establishment is also retained between revisions. This is done because, simply stated, the estimates are calculated by multiplying the sum of monthly reported values for each industry in each province by the ratio of the establishments in the sample to the census total for the same unit. Separate ratios are calculated for shipments, inventories and unfilled orders. If a report is not received in time for the monthly compilation an estimated value is written in. Since each month is published first as a preliminary value monthly returns are accepted up to the time the machine compilation is begun and late returns for the month will be used one month later in the revised estimate. Returns received after beginning the compilation for the next month (i.e. January returns received after the February compilation is begun) are not used in the estimates until the following annual revision.

Thus changes in the monthly series will arise from changes in the identity of establishments between censuses, and from the substitution of reported for estimated values.

The inventory values published are shown both for total inventory owned and total inventory held by an establishment. The difference between these values is the amount of inventory financed by progress payments as the work proceeds on goods being produced. Since some goods manufactured are held as in-progress inventory for a considerable time the book value of manufacturers' inventory may build up and, to the extent that this has been covered by the payment received, is higher than the manufacturers' investment in inventory. Both the amount of the manufacturers' investment in inventories and the amount of inventory held by manufacturers is of economic interest. It is also interesting to distinguish between inventory held by the degree of fabrication which has taken place. Consequently firms are asked to report their stocks by level of fabrication: raw materials and components; work in progress and finished products.

Unfilled orders cover orders received but not yet shipped, or treated as a sale, irrespective of work done on them or stocks from which they can be filled. Establishments in many industries do not maintain order books but fill orders as they are received from stocks. Most establishments which do maintain order books strike a value of unfilled orders on their books at the end of each accounting period. New orders received, although an estimate of considerable interest to economists as an indication of the rate at which new business is being received, is not often available from accounting records. Consequently the estimate for new orders published here is derived by industry, by province from the relationship between unfilled orders and shipments.

The definitions, classifications and groupings are taken from the census of manufactures.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

## TREND SUMMARY

Manufacturers' shipments, new orders and unfilled orders in March increased less than seasonally from February by 6.3 per cent, 9.5 per cent and 0.9 per cent to the preliminary estimates of \$3,167 million, \$3,202 million and \$3,771 million respectively. All three series were below those for March last year. After seasonal adjustment, March shipments were down 2.1 per cent and new orders and unfilled orders both dropped 1.1 per cent from the month before. The end-of-March level of manufacturers' owned inventories was fractionally down, but after seasonal adjustment, the estimate showed a slight rise, reflecting a small build-up in raw materials.

Both the ratios of owned inventories to shipments and finished products to shipments in March were seasonally down to 2.12 and 0.78 from 2.26 and 0.83 respectively in February. Based on seasonally adjusted estimates these ratios were higher in February.

Cumulative shipments for the first three months of 1968 totalled \$9,153 million, 3.4 per cent above the estimate of \$8,848 million of last year. The seasonally adjusted estimate of manufacturers' shipments for the first quarter of this year was off 0.3 per cent from the last quarter of 1967. The relatively low level of manufacturers' shipments in the quarter was due partly to the effects of labour disputes in some major industries.

Shipments of durable goods in March reached \$1,421 million, 7.5 per cent higher than in February but 3.1 per cent lower than in March, 1967. March shipments in non-durable goods industries also showed a 5.3 per cent rise from the month before and were 1.3 per cent up from the corresponding month a year ago. All but one durable goods major industry group reported increases in March shipments ranging from 1.4 per cent in the primary metal industries to 12.7 per cent in the wood industries. The only decrease was in the furniture and fixtures industries which dropped 1.4 per cent. In the transportation equipment industry group, shipments for March reached \$378 million, showing a below seasonal increase of \$34 million from February and a decline of \$37 million from March of last year, reflecting largely the effects of strikes in the motor vehicle and the motor vehicle parts and accessories industries. Within the non-durable goods category, foods and beverages, tobacco, and chemical and chemical products industry groups contributed substantially to the increase in March.

New orders received by durable goods manufacturers during March rose from \$1,279 million in February to \$1,446 million which was however, lower than that in the corresponding month in any of the preceding three years. At the preliminary estimate of \$3,299 million, unfilled orders for durable goods at the end of March were 0.8 per cent up from February but 3.1 per cent down from March of last year.

Owned inventories in durable goods manufacturing industries dropped 0.7 per cent from February to March, while non-durable producers reported a rise of 0.4 per cent. More significant decreases in March inventories occurred in raw materials owned by the industry groups of furniture and fixtures (-9.1 per cent), primary metal (-7.0 per cent) and paper and allied products (-5.8 per cent). Tobacco manufacturers on the other hand, reported the most substantial build-up in owned stock, also in the form of raw materials, from \$236 million in February to a record high of \$263 million in March.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

## CONCEPTS AND SOURCES

The monthly bulletin of manufacturers' shipments, inventories and orders publishes values of monthly shipments and inventories and unfilled orders on the books at the end of the month estimated on the basis of the latest census of manufactures by monthly returns from representative establishments in each industry. The December 1966 bulletin is the first issue in which the census base of 1964 is used. Values for 1962, 1963 and 1964 are derived directly from each annual census; values for 1965 and 1966 are projected from the 1964 census. The aggregate monthly shipments for each year which is based directly on a census should equal published census values. The year end inventory values published here are for December and thus will differ from the year end census values to the extent which establishments have reported to the census on a fiscal year ending at a date other than December 31. Unfilled orders on books are published for industries where orders are part of the accounting record.

The monthly survey covers approximately 6,500 establishments. The survey accepts combinations of establishments within companies on a monthly basis to accommodate monthly accounting records and also accepts estimates of inventories and orders values if actual records are not available. Many establishments in several industries take inventory only annually and keep no record of orders as orders. The number of firms reporting actual inventory values is approximately two-thirds of the total reporting shipments; approximately one third report unfilled orders.

The monthly sample of establishments in the survey is revised annually in accordance with the census base and the list is kept constant between revisions. The identity of an establishment is also retained between revisions. This is done because, simply stated, the estimates are calculated by multiplying the sum of monthly reported values for each industry in each province by the ratio of the establishments in the sample to the census total for the same unit. Separate ratios are calculated for shipments, inventories and unfilled orders. If a report is not received in time for the monthly compilation an estimated value is written in. Since each month is published first as a preliminary value monthly returns are accepted up to the time the machine compilation is begun and late returns for the month will be used one month later in the revised estimate. Returns received after beginning the compilation for the next month (i.e. January returns received after the February compilation is begun) are not used in the estimates until the following annual revision.

Thus changes in the monthly series will arise from changes in the identity of establishments between censuses, and from the substitution of reported for estimated values.

The inventory values published are shown both for total inventory owned and total inventory held by an establishment. The difference between these values is the amount of inventory financed by progress payments as the work proceeds on goods being produced. Since some goods manufactured are held as in-progress inventory for a considerable time the book value of manufacturers' inventory may build up and, to the extent that this has been covered by the payment received, is higher than the manufacturers' investment in inventory. Both the amount of the manufacturers' investment in inventories and the amount of inventory held by manufacturers is of economic interest. It is also interesting to distinguish between inventory held by the degree of fabrication which has taken place. Consequently firms are asked to report their stocks by level of fabrication: raw materials and components; work in progress and finished products.

Unfilled orders cover orders received but not yet shipped, or treated as a sale, irrespective of work done on them or stocks from which they can be filled. Establishments in many industries do not maintain order books but fill orders as they are received from stocks. Most establishments which do maintain order books strike a value of unfilled orders on their books at the end of each accounting period. New orders received, although an estimate of considerable interest to economists as an indication of the rate at which new business is being received, is not often available from accounting records. Consequently the estimate for new orders published here is derived by industry, by province from the relationship between unfilled orders and shipments.

The definitions, classifications and groupings are taken from the census of manufactures.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFULFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

## TREND SUMMARY

The preliminary estimate of manufacturers' shipments in April rose 3.0 per cent from \$3,171 million in March to \$3,265 million bringing the total shipments for the first four months in 1968 to \$12,422 million, 4.3 per cent higher than the corresponding period of last year. The increase in the shipments estimate for the same four month period in 1967 over 1966 was only 1.7 per cent.

New orders received by manufacturers during April reached \$3,257 million, 0.9 per cent ahead of the previous month but slightly below the shipments for the month. Consequently, backlog of unfilled orders for April was slightly down from the level in March. At the preliminary estimate of \$6,688 million, manufacturers owned inventories at the end of April dropped 0.6 per cent from the end of March.

Seasonally adjusted estimates of both shipments and new orders in April showed increases of 3.9 per cent and 4.3 per cent respectively from March after declining for the previous two months from January. The value of unfilled orders, seasonally adjusted, dropped fractionally from its March level, while total manufacturing inventory held in April, without seasonal influence, was also slightly down by 0.7 per cent with decreases occurring in raw materials and goods in process.

Shipments of durable goods in April reached a record high this year at \$1,503 million, a rise of 5.4 per cent over the month before and 7.4 per cent higher than April of last year. This gain in April was chiefly due to the substantial advances in shipments of the motor vehicle and the motor vehicle and parts and accessories industries in the transportation equipment group (+20.5 per cent) as they recovered from labour disputes in the previous two months. Among other major industry groups in durables, a relatively large increase was recorded in non-metallic mineral products (+10.2 per cent) and a noticeable decrease shown in electrical products (-4.9 per cent). Non-durable goods manufacturers reported only a small increase in April shipments from March (1.0 per cent). More significant increases in tobacco products and chemical and chemical products in this category were greatly offset by decreases in clothing and petroleum and coal products.

New orders for durable manufacturing goods in April at \$1,488 million were 1.5 higher than March and 9.0 per cent higher than April a year earlier. Unfilled orders of durable goods at the end of April were down slightly to \$3,297 million from the end of March.

The value of stocks owned by durable goods industries in April was 0.6 per cent higher than in March with the build-up mainly in finished products. The decrease in goods in process inventory held in the month reflected mainly the drop in inventory held but not owned. Owned stocks of non-durable goods, on the other hand, declined rather substantially from \$3,424 million in March to \$3,366 million in April (-1.7 per cent). This decrease was attributable largely to the drop in raw materials of tobacco products and paper and allied products and in finished products of foods and beverages.

In April the ratios of the value of owned inventory to shipments and finished products to shipments were down to 2.05 and 0.76 respectively from 2.12 and 0.78 in March and 2.16 and 0.80 in April 1967. Based on the seasonally adjusted estimates, both ratios in April dropped from 2.15 and 0.78 to 2.06 and 0.76.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

## CONCEPTS AND SOURCES

The monthly bulletin of manufacturers' shipments, inventories and orders publishes values of monthly shipments and inventories and unfilled orders on the books at the end of the month estimated on the basis of the latest census of manufactures by monthly returns from representative establishments in each industry. The December 1966 bulletin is the first issue in which the census base of 1964 is used. Values for 1962, 1963 and 1964 are derived directly from each annual census; values for 1965 and 1966 are projected from the 1964 census. The aggregate monthly shipments for each year which is based directly on a census should equal published census values. The year end inventory values published here are for December and thus will differ from the year end census values to the extent which establishments have reported to the census on a fiscal year ending at a date other than December 31. Unfilled orders on books are published for industries where orders are part of the accounting record.

The monthly survey covers approximately 6,500 establishments. The survey accepts combinations of establishments within companies on a monthly basis to accommodate monthly accounting records and also accepts estimates of inventories and orders values if actual records are not available. Many establishments in several industries take inventory only annually and keep no record of orders as orders. The number of firms reporting actual inventory values is approximately two-thirds of the total reporting shipments; approximately one third report unfilled orders.

The monthly sample of establishments in the survey is revised annually in accordance with the census base and the list is kept constant between revisions. The identity of an establishment is also retained between revisions. This is done because, simply stated, the estimates are calculated by multiplying the sum of monthly reported values for each industry in each province by the ratio of the establishments in the sample to the census total for the same unit. Separate ratios are calculated for shipments, inventories and unfilled orders. If a report is not received in time for the monthly compilation an estimated value is written in. Since each month is published first as a preliminary value monthly returns are accepted up to the time the machine compilation is begun and late returns for the month will be used one month later in the revised estimate. Returns received after beginning the compilation for the next month (i.e. January returns received after the February compilation is begun) are not used in the estimates until the following annual revision.

Thus changes in the monthly series will arise from changes in the identity of establishments between censuses, and from the substitution of reported for estimated values.

The inventory values published are shown both for total inventory owned and total inventory held by an establishment. The difference between these values is the amount of inventory financed by progress payments as the work proceeds on goods being produced. Since some goods manufactured are held as in-progress inventory for a considerable time the book value of manufacturers' inventory may build up and, to the extent that this has been covered by the payment received, is higher than the manufacturers' investment in inventory. Both the amount of the manufacturers' investment in inventories and the amount of inventory held by manufacturers is of economic interest. It is also interesting to distinguish between inventory held by the degree of fabrication which has taken place. Consequently firms are asked to report their stocks by level of fabrication: raw materials and components; work in progress and finished products.

Unfilled orders cover orders received but not yet shipped, or treated as a sale, irrespective of work done on them or stocks from which they can be filled. Establishments in many industries do not maintain order books but fill orders as they are received from stocks. Most establishments which do maintain order books strike a value of unfilled orders on their books at the end of each accounting period. New orders received, although an estimate of considerable interest to economists as an indication of the rate at which new business is being received, is not often available from accounting records. Consequently the estimate for new orders published here is derived by industry, by province from the relationship between unfilled orders and shipments.

The definitions, classifications and groupings are taken from the census of manufactures.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

## TREND SUMMARY

Manufacturers' shipments and new orders in May increased by \$179 million and \$237 million to new record highs of \$3,459 million and \$3,487 million respectively from the values in April. The backlog of unfilled orders at the end of May amounted to \$3,793 million, slightly higher than that at the end of April, and for the first time in 1968, was above the value in the corresponding month of last year. At the preliminary estimate of \$6,630 million in May, manufacturers' owned inventories receded again by 0.6 per cent from the previous month and from May of 1967 with the largest decline occurring in finished products.

After seasonal adjustment, the preliminary estimates of shipments, new orders and unfilled orders in May advanced 1.0 per cent, 3.6 per cent and 1.4 per cent respectively from the month before. Seasonally adjusted May total inventory holdings, on the other hand, dropped 0.5 per cent with decreases showing in all three inventory components.

The ratios of manufacturers' owned inventories to shipments and finished products to shipments in May dropped substantially to 1.92 and 0.71 respectively from 2.03 and 0.76 in April and 2.04 and 0.75 in May 1967. Based on the seasonally adjusted estimates both ratios in May declined significantly to their lowest records (2.02, 0.74) since 1967.

Total shipments of durable goods rose sharply again in May by 10.6 per cent from April and 11.4 per cent from May a year earlier to the preliminary estimate of \$1,668 million. At an increase of 23.8 per cent from \$452 million in April to \$559 million in May, transportation equipment industries reported the largest gain in May reflecting mainly the large shipments increases in the motor vehicle and motor vehicle parts and accessories industries which continued to recover from labour disputes in February and March. Other more significant increases within the durable goods category occurred in wood (10.0 per cent) and non-metallic mineral products (19.7 per cent) industries. Non-durable goods producers, on the other hand, reported only a small shipments increase of 1.1 per cent in May; increases in foods and beverages, paper and allied products and chemical and chemical products industries were greatly offset by decreases in tobacco products, rubber and clothing industries most of which reflected seasonal movements of the month.

New orders for durable manufactured goods reached a new high of \$1,682 million in May, a rise of 14.8 per cent over the previous month and 17.6 per cent above the estimates in May 1967. Unfilled orders at the end of May, at the preliminary estimate of \$3,284 million, were 0.4 per cent up from April but down 0.6 per cent from the corresponding month of last year.

About two-thirds of the actual decline in the value of owned inventories in May came from non-durable industry groups with more substantial decreases shown in tobacco products (-4.4 per cent), paper and allied products (-2.4 per cent) and chemical and chemical products (-2.1 per cent) industries. Within the durable goods industries which dropped 0.4 per cent in May, furniture (-4.3 per cent) and transportation equipment (-1.4 per cent) industries reported the more prominent decreases. Among all manufacturing industry groups, petroleum and coal products industries recorded a sizable build-up of 2.5 per cent in owned inventories; decreases in goods in process and finished products were largely outweighed by a large increase in raw materials.

# INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

## CONCEPTS AND SOURCES

The monthly bulletin of manufacturers' shipments, inventories and orders publishes values of monthly shipments and inventories and unfilled orders on the books at the end of the month estimated on the basis of the latest census of manufactures by monthly returns from representative establishments in each industry. The December 1966 bulletin is the first issue in which the census base of 1964 is used. Values for 1962, 1963 and 1964 are derived directly from each annual census; values for 1965 and 1966 are projected from the 1964 census. The aggregate monthly shipments for each year which is based directly on a census should equal published census values. The year end inventory values published here are for December and thus will differ from the year end census values to the extent which establishments have reported to the census on a fiscal year ending at a date other than December 31. Unfilled orders on books are published for industries where orders are part of the accounting record.

The monthly survey covers approximately 6,500 establishments. The survey accepts combinations of establishments within companies on a monthly basis to accommodate monthly accounting records and also accepts estimates of inventories and orders values if actual records are not available. Many establishments in several industries take inventory only annually and keep no record of orders as orders. The number of firms reporting actual inventory values is approximately two-thirds of the total reporting shipments; approximately one third report unfilled orders.

The monthly sample of establishments in the survey is revised annually in accordance with the census base and the list is kept constant between revisions. The identity of an establishment is also retained between revisions. This is done because, simply stated, the estimates are calculated by multiplying the sum of monthly reported values for each industry in each province by the ratio of the establishments in the sample to the census total for the same unit. Separate ratios are calculated for shipments, inventories and unfilled orders. If a report is not received in time for the monthly compilation an estimated value is written in. Since each month is published first as a preliminary value monthly returns are accepted up to the time the machine compilation is begun and late returns for the month will be used one month later in the revised estimate. Returns received after beginning the compilation for the next month (i.e. January returns received after the February compilation is begun) are not used in the estimates until the following annual revision.

Thus changes in the monthly series will arise from changes in the identity of establishments between censuses, and from the substitution of reported for estimated values.

The inventory values published are shown both for total inventory owned and total inventory held by an establishment. The difference between these values is the amount of inventory financed by progress payments as the work proceeds on goods being produced. Since some goods manufactured are held as in-progress inventory for a considerable time the book value of manufacturers' inventory may build up and, to the extent that this has been covered by the payment received, is higher than the manufacturers' investment in inventory. Both the amount of the manufacturers' investment in inventories and the amount of inventory held by manufacturers is of economic interest. It is also interesting to distinguish between inventory held by the degree of fabrication which has taken place. Consequently firms are asked to report their stocks by level of fabrication: raw materials and components; work in progress and finished products.

Unfilled orders cover orders received but not yet shipped, or treated as a sale, irrespective of work done on them or stocks from which they can be filled. Establishments in many industries do not maintain order books but fill orders as they are received from stocks. Most establishments which do maintain order books strike a value of unfilled orders on their books at the end of each accounting period. New orders received, although an estimate of considerable interest to economists as an indication of the rate at which new business is being received, is not often available from accounting records. Consequently the estimate for new orders published here is derived by industry, by province from the relationship between unfilled orders and shipments.

The definitions, classifications and groupings are taken from the census of manufactures.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

## TREND SUMMARY

Manufacturers' shipments and new orders in May increased by \$179 million and \$237 million to new record highs of \$3,459 million and \$3,487 million respectively from the values in April. The backlog of unfilled orders at the end of May amounted to \$3,793 million, slightly higher than that at the end of April, and for the first time in 1968, was above the value in the corresponding month of last year. At the preliminary estimate of \$6,630 million in May, manufacturers' owned inventories receded again by 0.6 per cent from the previous month and from May of 1967 with the largest decline occurring in finished products.

After seasonal adjustment, the preliminary estimates of shipments, new orders and unfilled orders in May advanced 1.0 per cent, 3.6 per cent and 1.4 per cent respectively from the month before. Seasonally adjusted May total inventory holdings, on the other hand, dropped 0.5 per cent with decreases showing in all three inventory components.

The ratios of manufacturers' owned inventories to shipments and finished products to shipments in May dropped substantially to 1.92 and 0.71 respectively from 2.03 and 0.76 in April and 2.04 and 0.75 in May 1967. Based on the seasonally adjusted estimates both ratios in May declined significantly to their lowest records (2.02, 0.74) since 1967.

Total shipments of durable goods rose sharply again in May by 10.6 per cent from April and 11.4 per cent from May a year earlier to the preliminary estimate of \$1,668 million. At an increase of 23.8 per cent from \$452 million in April to \$559 million in May, transportation equipment industries reported the largest gain in May reflecting mainly the large shipments increases in the motor vehicle and motor vehicle parts and accessories industries which continued to recover from labour disputes in February and March. Other more significant increases within the durable goods category occurred in wood (10.0 per cent) and non-metallic mineral products (19.7 per cent) industries. Non-durable goods producers, on the other hand, reported only a small shipments increase of 1.1 per cent in May; increases in foods and beverages, paper and allied products and chemical and chemical products industries were greatly offset by decreases in tobacco products, rubber and clothing industries most of which reflected seasonal movements of the month.

New orders for durable manufactured goods reached a new high of \$1,682 million in May, a rise of 14.8 per cent over the previous month and 17.6 per cent above the estimates in May 1967. Unfilled orders at the end of May, at the preliminary estimate of \$3,284 million, were 0.4 per cent up from April but down 0.6 per cent from the corresponding month of last year.

About two-thirds of the actual decline in the value of owned inventories in May came from non-durable industry groups with more substantial decreases shown in tobacco products (-4.4 per cent), paper and allied products (-2.4 per cent) and chemical and chemical products (-2.1 per cent) industries. Within the durable goods industries which dropped 0.4 per cent in May, furniture (-4.3 per cent) and transportation equipment (-1.4 per cent) industries reported the more prominent decreases. Among all manufacturing industry groups, petroleum and coal products industries recorded a sizable build-up of 2.5 per cent in owned inventories; decreases in goods in process and finished products were largely outweighed by a large increase in raw materials.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

## CONCEPTS AND SOURCES

The monthly bulletin of manufacturers' shipments, inventories and orders publishes values of monthly shipments and inventories and unfilled orders on the books at the end of the month estimated on the basis of the latest census of manufactures by monthly returns from representative establishments in each industry. The December 1966 bulletin is the first issue in which the census base of 1964 is used. Values for 1962, 1963 and 1964 are derived directly from each annual census; values for 1965 and 1966 are projected from the 1964 census. The aggregate monthly shipments for each year which is based directly on a census should equal published census values. The year end inventory values published here are for December and thus will differ from the year end census values to the extent which establishments have reported to the census on a fiscal year ending at a date other than December 31. Unfilled orders on books are published for industries where orders are part of the accounting record.

The monthly survey covers approximately 6,500 establishments. The survey accepts combinations of establishments within companies on a monthly basis to accommodate monthly accounting records and also accepts estimates of inventories and orders values if actual records are not available. Many establishments in several industries take inventory only annually and keep no record of orders as orders. The number of firms reporting actual inventory values is approximately two-thirds of the total reporting shipments; approximately one third report unfilled orders.

The monthly sample of establishments in the survey is revised annually in accordance with the census base and the list is kept constant between revisions. The identity of an establishment is also retained between revisions. This is done because, simply stated, the estimates are calculated by multiplying the sum of monthly reported values for each industry in each province by the ratio of the establishments in the sample to the census total for the same unit. Separate ratios are calculated for shipments, inventories and unfilled orders. If a report is not received in time for the monthly compilation an estimated value is written in. Since each month is published first as a preliminary value monthly returns are accepted up to the time the machine compilation is begun and late returns for the month will be used one month later in the revised estimate. Returns received after beginning the compilation for the next month (i.e. January returns received after the February compilation is begun) are not used in the estimates until the following annual revision.

Thus changes in the monthly series will arise from changes in the identity of establishments between censuses, and from the substitution of reported for estimated values.

The inventory values published are shown both for total inventory owned and total inventory held by an establishment. The difference between these values is the amount of inventory financed by progress payments as the work proceeds on goods being produced. Since some goods manufactured are held as in-progress inventory for a considerable time the book value of manufacturers' inventory may build up and, to the extent that this has been covered by the payment received, is higher than the manufacturers' investment in inventory. Both the amount of the manufacturers' investment in inventories and the amount of inventory held by manufacturers is of economic interest. It is also interesting to distinguish between inventory held by the degree of fabrication which has taken place. Consequently firms are asked to report their stocks by level of fabrication: raw materials and components; work in progress and finished products.

Unfilled orders cover orders received but not yet shipped, or treated as a sale, irrespective of work done on them or stocks from which they can be filled. Establishments in many industries do not maintain order books but fill orders as they are received from stocks. Most establishments which do maintain order books strike a value of unfilled orders on their books at the end of each accounting period. New orders received, although an estimate of considerable interest to economists as an indication of the rate at which new business is being received, is not often available from accounting records. Consequently the estimate for new orders published here is derived by industry, by province from the relationship between unfilled orders and shipments.

The definitions, classifications and groupings are taken from the census of manufactures.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

## TREND SUMMARY

The value of manufacturing shipments in June, estimated at \$3,381 million was \$134 million or 3.8 per cent lower than the revised estimate for May. New orders for June, at \$3,331 million, were 5.5 per cent down from the previous month, and unfilled orders, at \$3,725 million, dropped 1.3 per cent. Adjusted for trading-day and seasonal variations, the June shipments and new orders, after having registered advances for the previous two months, showed small decreases of 1.1 per cent and 2.7 per cent respectively. The level of unfilled orders, seasonally adjusted, was also slightly lower than a month earlier.

Following the trend in the preceding two months, manufacturers' total owned inventories, at the estimate of \$6,563 million at the end of June, declined slightly more than seasonally from the end of May (-1.1 per cent); the largest decrease was shown in goods in process inventory. Seasonally adjusted total inventory held in the month, however, was fractionally higher than the month before chiefly because of a large accumulation in inventory held but not owned.

Total manufacturers' shipments for the first six months of 1968 amounted to \$19,334 million, a gain of 4.6 per cent over the estimate for the same period of last year, with increases of 5.8 per cent recorded in durable goods and 3.5 per cent in non-durable goods industries. The increase in cumulative shipments for the same period of last year over 1966 was 1.9 per cent, occurring entirely in non-durable goods. Among major industry groups relatively large advances in shipments during the first half of this year over the corresponding period of last year were recorded in the knitting mills (15.4 per cent), the primary metal industries (13.2 per cent), and the transportation equipment industries (10.3 per cent); substantial declines were reported in machinery (-6.9 per cent) and furniture and fixtures, (-6.8 per cent).

Shipments of durable goods estimated at \$1,592 million in June, were \$100 million lower than the revised estimate in May, but 4.8 per cent higher than June of last year. This decrease was partly due to relatively fewer working days in June. The decreases of 13.9 per cent in transportation equipment, 6.0 per cent in primary metals and 4.0 per cent in wood industries were larger than in other industry groups, while electrical products industries recorded a rise of 2.7 per cent. Non-durable goods producers as a whole also reported a small drop in the June value of shipments, with the most sizable decline shown in the chemical and chemical products industries (-11.0 per cent).

At the estimate of \$1,540 million, new orders of durable goods in June were \$154 million down from the record high in May. Unfilled orders for the month also dropped 1.6 per cent from May and 2.3 per cent from June 1967. This drop was attributed mainly to the decreases in the transportation equipment industries (-4.6 per cent) and the machinery industries (-3.3 per cent).

June inventory owned by durable goods manufacturers fell 1.7 per cent to \$3,260 million, the lowest level so far in 1968, and below the figure for June 1967. The most significant decline (-\$50 million) occurred in the transportation equipment industries. In the non-durable goods category, the value of owned inventories in June was slightly down from May. Most of the industry groups showed decreases, while the paper and allied products industries rose 3.3 per cent.

The June ratios of owned inventories to shipments and finished products to shipments, based on seasonally adjusted estimates, rose slightly to 2.01 and 0.75 respectively from 1.99 and 0.74 in May.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

## CONCEPTS AND SOURCES

The monthly bulletin of manufacturers' shipments, inventories and orders publishes values of monthly shipments and inventories and unfilled orders on the books at the end of the month estimated on the basis of the latest census of manufactures by monthly returns from representative establishments in each industry. The December 1966 bulletin is the first issue in which the census base of 1964 is used. Values for 1962, 1963 and 1964 are derived directly from each annual census; values for 1965 and 1966 are projected from the 1964 census. The aggregate monthly shipments for each year which is based directly on a census should equal published census values. The year end inventory values published here are for December and thus will differ from the year end census values to the extent which establishments have reported to the census on a fiscal year ending at a date other than December 31. Unfilled orders on books are published for industries where orders are part of the accounting record.

The monthly survey covers approximately 6,500 establishments. The survey accepts combinations of establishments within companies on a monthly basis to accommodate monthly accounting records and also accepts estimates of inventories and orders values if actual records are not available. Many establishments in several industries take inventory only annually and keep no record of orders as orders. The number of firms reporting actual inventory values is approximately two-thirds of the total reporting shipments; approximately one third report unfilled orders.

The monthly sample of establishments in the survey is revised annually in accordance with the census base and the list is kept constant between revisions. The identity of an establishment is also retained between revisions. This is done because, simply stated, the estimates are calculated by multiplying the sum of monthly reported values for each industry in each province by the ratio of the establishments in the sample to the census total for the same unit. Separate ratios are calculated for shipments, inventories and unfilled orders. If a report is not received in time for the monthly compilation an estimated value is written in. Since each month is published first as a preliminary value monthly returns are accepted up to the time the machine compilation is begun and late returns for the month will be used one month later in the revised estimate. Returns received after beginning the compilation for the next month (i.e. January returns received after the February compilation is begun) are not used in the estimates until the following annual revision.

Thus changes in the monthly series will arise from changes in the identity of establishments between censuses, and from the substitution of reported for estimated values.

The inventory values published are shown both for total inventory owned and total inventory held by an establishment. The difference between these values is the amount of inventory financed by progress payments as the work proceeds on goods being produced. Since some goods manufactured are held as in-progress inventory for a considerable time the book value of manufacturers' inventory may build up and, to the extent that this has been covered by the payment received, is higher than the manufacturers' investment in inventory. Both the amount of the manufacturers' investment in inventories and the amount of inventory held by manufacturers is of economic interest. It is also interesting to distinguish between inventory held by the degree of fabrication which has taken place. Consequently firms are asked to report their stocks by level of fabrication: raw materials and components; work in progress and finished products.

Unfilled orders cover orders received but not yet shipped, or treated as a sale, irrespective of work done on them or stocks from which they can be filled. Establishments in many industries do not maintain order books but fill orders as they are received from stocks. Most establishments which do maintain order books strike a value of unfilled orders on their books at the end of each accounting period. New orders received, although an estimate of considerable interest to economists as an indication of the rate at which new business is being received, is not often available from accounting records. Consequently the estimate for new orders published here is derived by industry, by province from the relationship between unfilled orders and shipments.

The definitions, classifications and groupings are taken from the census of manufactures.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

## REVISIONS TO THE SERIES

Along with a general revision of the monthly series of shipments, inventories and orders from January 1965 to the current month, published in this issue, some other adjustments have been made in the series dating back to 1961. The general revision of the series from 1965 to date results from the adoption of 1965 census benchmarks from which current monthly estimates are now projected. Previous estimates were projected from 1964 census data.

The principal change in the 1961 series from previously published figures is in the values for the smelting and refining industry. The 1961 estimates for that industry are now comparable in definition to the estimates for 1962 and later years wherein the value of metal produced by smelting and refining processes that are part of integrated mining companies is no longer considered manufacturers' shipments. Additional other minor adjustments have been made throughout the series to bring them in line with published census data.

Several factors contributed to the revisions for each month from January 1966 to date although, in general, the month-to-month trends are not significantly changed. Adjustment to 1965 census base values meant similar corrections were extended through all succeeding months. These, in turn, should be closer to the actual values that will be compiled by the census for the respective years. The number of firms that report has been increased substantially in some industries in the past two years. Analysis of 1965 census data has resulted in re-classification of some establishments among industries or to other activities such as trade or construction and values have been incorporated from sampled establishments that responded too late for their values to be included in the regular compilations.

As a result of 1965 census reports analysis a number of establishments were transferred from the synthetic textiles industry to the carpet, mat and rug industry to bring about a relatively substantial increase in the estimated shipments for the latter industry. Certain other adjustments to both industry and provincial totals for recent months result from being able for the first time to measure current activity of some individual establishments in some industries and provinces. In these cases values received heretofore in a combined company report, were subject to an a priori division, based on census data, for allocation to the appropriate place in the sample frame.

This publication contains estimates of shipments in major group 11, the printing and publishing industry from 1964 to date and of inventories in that industry for the months from January 1967 to date. With publication of this series, values for all of the 20 major groups of manufacturing industries in the 1960 standard industrial classification become available on a current basis. In addition, the data for individual industries now include estimates of current values for all the sub-group components of major group 19, chemical and chemical products industries. These additional individual industries now shown are manufacturers of printing inks, industrial chemicals, and other chemical industries not elsewhere specified. The latter values include those for manufacturers of explosives and ammunition.

## THE NEW ECONOMIC USE GROUPINGS

Publication of manufacturers' shipments, inventories and orders grouped according to an economic use classification was temporarily suspended in 1963 when the monthly survey was adjusted to the 1960 base which had been revised to the new Standard Industrial Classification and the new establishment concept. The separate industries as revised under the Standard Industrial Classification have now been re-grouped into an economic use classification that is published in this issue of the monthly report with time series from January 1961 to date.

The main purpose of the classification is to facilitate analysis of trends by grouping the individual manufacturing industries according to the main use of their products. The 1960 Standard Industrial Classification is, from this point of view, an improvement over the old classification in that it is based on the underlying criteria of the process carried on and the end - product produced rather than on the basic raw material used. Extensive use of the purpose or use of products in the new industrial classification has brought many individual industries more closely in line with the economic use concept. However, reliance on individual industry data may involve too much detail and some industry data may not be available. Nor is the use of major industry groups very satisfactory because too many diverging trends of the demand factors are concealed. For example, industry groups such as food and beverages, machinery and transportation equipment classified under the criterion of end products, consist of some industries whose main products are also classifiable to intermediate goods and supplies or to export goods. In the same way some major industry groups classified on the basis of chief component material such as leather goods or wood include some individual industries that produce mainly consumer goods and some that produce largely for export. Therefore, an economic use classification based on a similarity in the demand factors which affect industries is a useful addition to the all industry total and to the major industry group levels.

In revising the economic use classification, the groupings of consumer goods, capital goods and construction goods have been made to agree with the concepts of the national accounts as closely as possible.

This classification of manufacturing industries into different economic use groups presents some problems in that it involves the identification of the nature and uses of the products of each industry and the assigning of each individual industry to one specific group. In the first place, because specific items of output may be used for many different purposes, many items may be regarded as final products or as intermediate goods. An end-product may be used for consumption, for investment or for export. Similarly, intermediate goods may be used for further processing, as component parts, for construction or for export. Secondly, according to the 1960 Standard Industrial Classification, each establishment is assigned to one of the industries on the basis of its principal product or activity. Each industry in turn is classified in terms of its principal products and assigned to a specific major industry group. Only in comparatively new industries is the output of a typical establishment confined to one commodity. Thus, within most industries, the output includes a variety of commodities of various economic uses. So, while on the basis of the chief use of their products, some industries appear to fall quite clearly into specific groups, classification of others is not as obvious because of the variety of commodities produced.

The criterion for this classification of economic use groups was the main use of the products produced or handled. An industry was assigned to a particular group when more than half of its products fell into the category or when slightly less than half of the products belonged to a group while the remainder was scattered over two or more groups. In some industries, detailed analysis of the various uses of commodities produced was necessary before classification was made. The value of shipments of the 1964 census of manufactures was the basis for commodity breakdown. In many cases, the 1961 Channel of distribution of the Manufacturing Industries was used in addition to other sources. It should be noted that groupings of these industries may be revised in the future when the main use of products has changed.

Many changes have been made for this new classification of economic use groups. Based on the 1960 Standard Industrial Classification and the rules for grouping mentioned above, all manufacturing industries have been classified, thereby eliminating the former sub-group of "Unclassifiable Industries".

In order to tie in with the concepts of the national accounts, industries formerly included in the sub-group of "Semi-durable Consumer Goods Industries" are now classified with "Durable Consumer Goods Industries" or "Non-Durable Consumer Goods Industries". The former sub-groups of "Heavy Transportation Equipment Industries" and "Machinery industries" are now combined under the single heading, "Machinery and Equipment Industries" representing the final products of capital goods.

Individual industries formerly classified to the miscellaneous industries sub-group of "Motor Vehicles and Related Industries" have been assigned to consumers' goods or intermediate goods. At the same time, these industries are also shown as a separate supplementary category. The groupings of construction goods, intermediate goods and supplies and largely export goods industries remain the same as before although their industry content has been changed to some extent.

While the groupings of the economic use groups have been built up in line with the concepts of the national accounts, they do not all correspond exactly with those sectors of the accounts. Because a great number of the individual industries are published separately, it is possible that some modification in the composition of groupings can be made by individual users for specific analytical purposes.

(1) The value of Unfilled Orders and therefore, of New orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

(3) Separate values for 1961 to 1963 are not available; they are included in Table 2. Shipment values are available from January 1964 and inventory values are available from January 1967.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and an Economic Use Grouping are listed below.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

STANDARD INDUSTRIAL CLASSIFICATION

CONCEPTS AND METHODS

Inventories, shipments and orders values in this publications are monthly projections of annual census of manufactures values based on returns from a representative sample of manufacturing establishments. The July 1968 data are the first to be based on the 1965 census. Values for years prior to and including 1965 are derived directly from the census and the aggregate of monthly shipments in those years should equal published census values. Because the monthly values subsequent to 1965 are projections, these totals are subject to adjustment when more recent census data become available. Year end inventory values published here are for December and differ from year end census values to the extent that fiscal year census reports show inventory values at dates other than December 31. Unfilled orders on books are published for industries where orders are part of the accounting records.

Monthly reports are sought from establishments whose shipments in total represent about 75 per cent of the aggregate shipments in each industry. For adequate estimation of total shipments by province, the sample is further strengthened by reports from representative establishments in each industry in each province. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combination reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. About two-thirds of the 8,000 firms now included in the sample report inventory values and about one-third report orders.

The estimates of shipments are calculated each month by multiplying the sum of the values in the current sample in each industry in each province by the ratio of similarly defined census aggregates to the sum of the values reported by the sample in the census year. Ratios of calculated December 31 values in the census year to the sum of the sample values of the same data are derived for inventories by component (i.e. raw materials and components, goods in process and finished products) and for unfilled orders. These ratios are applied to the current sample aggregates of the same items.

Inventory values are published for both total inventory owned and total inventory held by establishments. The difference between these values is the amount of inventory financed by progress payments as work proceeds on goods being produced. Because some goods are held as in-progress inventory for a considerable time the book value of manufacturers' inventory may build up. To the extent that this has been covered by payments received, it will be higher than the manufacturers' investment in inventory. Both the amount of the manufacturers' investment in inventories and the amount of inventory held by manufacturers are of economic interest. It is also useful for derivation of production values in many industries and for other economic studies to measure the value of inventory held by the degree of fabrication that has taken place. Consequently firms are asked to report their stocks and estimates are made of the values by level of fabrication: raw materials and components, goods in progress and finished products.

Most establishments that maintain orders books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled as received from stocks on hand and orders books are, therefore, not generally maintained.

New orders are calculated to provide an indication of the rate at which new business is being received. The series, which is of considerable interest to economists and marketing people, is derived by adjusting current shipments by the changes between the opening and closing backlogs.

Because a constant sample is used between census revisions, values must be estimated for each establishment when response has not been received at compilation time. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. Values received currently for months earlier than that for which revised figures have been published are used when all series are adjusted to new census benchmarks.

At the time of adjustments to census benchmarks, there may be substantial changes in the series. These may be caused by changes in the industrial classification of firms when their activity has been analysed for census purposes after preliminary estimates of industry totals have been made for this series; by inclusion of month-by-month responses received too late for use in calculating preliminary or revised data and by changes in accounting and, therefore, reporting methods by multi-establishment companies.

Definitions, classifications and groupings are taken from the census of manufactures.

#### NOTE TO USERS

The following changes have been made in the values for historical series published in this issue from those for similar dates in the July 1968 publication: the value for new orders reported for durable goods in January 1966 has been changed to \$1,347,848; the seasonally adjusted estimate for shipments in all manufacturing industries for August 1967, has been changed to \$3,286,100 and new orders to \$3,231-100; a small adjustment has been made to 1968 shipments values for the period from February 1968 to July 1968 as a result of a correction to the sample values incorporated in the estimates in the paper box and bag manufacturers' industry. While this change is most apparent in that industry, the relative change in the monthly estimates for all other aggregates of 1968 shipments that includes the values for that industry such as those for group 10, provincial shipments, economic use groupings and Canada-wide totals is minimal.

# PROPORTIONS OF SHIPMENTS IN ALL MANUFACTURING INDUSTRIES BY AN ECONOMIC USE GROUPING

## TREND SUMMARY

Manufacturers' values of shipments and new orders in September increased more than seasonally to \$3,561 million and \$3,523 million respectively from the revised estimates of \$3,246 million and \$3,264 million in August. After adjustment for trading-day and seasonal variation were made, September shipments gained 2.7 per cent and new orders rose 4.5 per cent, both representing an advance for the third consecutive month. Seasonally adjusted backlog of orders at the end of September was also 1.0 per cent higher than at the end of August. Manufacturers' end-of-September owned stocks showed a higher level of 1.0 per cent, or 1.1 per cent seasonally adjusted, compared with the previous month. This build-up in September was higher in raw materials than in finished products while goods in process showed a decline reflecting largely a drop in stocks held but not owned for the month.

Cumulative value of shipments ending September this year reached \$29,837 million, 4.7 per cent ahead of the estimate of \$28,502 million for the same period last year. About 60 per cent of this gain came from the durable goods sector which rose 6.3 per cent. Non-durable goods industries as a whole recorded an increase of 3.4 per cent over last year.

The gain in September manufacturing shipments was also attributed chiefly to the rise in the durable goods industry category. Transportation equipment industries reported the most substantial actual advance of \$205 million over August. This more than seasonal increase in the value of shipments was due mainly to a continued strength in the motor vehicle and motor vehicle parts and accessories industry groups. Excepting the non-metallic mineral products industry, all the durable industry groups indicated increases in September. Compared with the same month of last year, significant shipments increases showed up in transportation equipment (21.2 per cent), wood (14.0 per cent) and primary metal (12.4 per cent) industry groups. Within the non-durable goods industries, more than seasonal increases in shipments were recorded in rubber, tobacco and paper industries, while a less than seasonal increase occurred in the chemical and chemical products industries.

New orders received by durable goods manufacturers during September reached \$1,615 million, more than seasonally higher than the month before. This value of new orders was less than the value of shipments for the month. As a result, end-of-September unfilled orders dropped \$47 million.

Both durable and non-durable industry categories showed accumulation of owned stocks in September at 1.1 per cent and 1.0 per cent respectively higher than in August. All industry groups reported mixed seasonal movements in September, with increases in nine industry groups more than offsetting decreases in the other 11 groups. Relatively sizable and more than seasonal increases occurred in wood, and paper and allied industries.

Based on the seasonally adjusted estimates, the ratios of manufacturers' September total owned inventories to shipments and finished products to shipments dropped to 1.92 and 0.72 respectively from 1.95 and 0.73 in August.

(1) The value of Unfilled Orders and therefore, of New orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

(3) Monthly inventory values are not available prior to January, 1967.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and an Economic Use Grouping are listed below.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

## CONCEPTS AND METHODS

Inventories, shipments and orders values in this publication are monthly projections of annual census of manufactures values based on returns from a representative sample of manufacturing establishments. The July 1968 data are the first to be based on the 1965 census. Values for years prior to and including 1965 are derived directly from the census and the aggregate of monthly shipments in those years should equal published census values. Because the monthly values subsequent to 1965 are projections, these totals are subject to adjustment when more recent census data become available. Year end inventory values published here are for December and differ from year end census values to the extent that fiscal year census reports show inventory values at dates other than December 31. Unfilled orders on books are published for industries where orders are part of the accounting records.

Monthly reports are sought from establishments whose shipments in total represent about 75 per cent of the aggregate shipments in each industry. For adequate estimation of total shipments by province, the sample is further strengthened by reports from representative establishments in each industry in each province. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combination reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. About two-thirds of the 8,000 firms now included in the sample report inventory values and about one-third report orders.

The estimates of shipments are calculated each month by multiplying the sum of the values in the current sample in each industry in each province by the ratio of similarly defined census aggregates to the sum of the values reported by the sample in the census year. Ratios of calculated December 31 values in the census year to the sum of the sample values of the same data are derived for inventories by component (i.e. raw materials and components, goods in process and finished products) and for unfilled orders. These ratios are applied to the current sample aggregates of the same items.

Inventory values are published for both total inventory owned and total inventory held by establishments. The difference between these values is the amount of inventory financed by progress payments as work proceeds on goods being produced. Because some goods are held as in-progress inventory for a considerable time the book value of manufacturers' inventory may build up. To the extent that this has been covered by payments received, it will be higher than the manufacturers' investment in inventory. Both the amount of the manufacturers' investment in inventories and the amount of inventory held by manufacturers are of economic interest. It is also useful for derivation of production values in many industries and for other economic studies to measure the value of inventory held by the degree of fabrication that has taken place. Consequently firms are asked to report their stocks and estimates are made of the values by level of fabrication: raw materials and components, goods in progress and finished products.

Most establishments that maintain orders books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled as received from stocks on hand and orders books are, therefore, not generally maintained.

New orders are calculated to provide an indication of the rate at which new business is being received. The series, which is of considerable interest to economists and marketing people, is derived by adjusting current shipments by the changes between the opening and closing backlogs.

Because a constant sample is used between census revisions, values must be estimated for each establishment when response has not been received at compilation time. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. Values received currently for months earlier than that for which revised figures have been published are used when all series are adjusted to new census benchmarks.

At the time of adjustments to census benchmarks, there may be substantial changes in the series. These may be caused by changes in the industrial classification of firms when their activity has been analysed for census purposes after preliminary estimates of industry totals have been made for this series; by inclusion of month-by-month responses received too late for use in calculating preliminary or revised data and by changes in accounting and, therefore, reporting methods by multi-establishment companies.

Definitions, classifications and groupings are taken from the census of manufactures.

## TREND SUMMARY

### Shipments

Fractional increases in the seasonally adjusted estimates of shipments both non-durable and durable goods producing industries contributed to a slightly more than \$6 million increase for one month in the seasonally adjusted total estimate of \$3,566.0 million for shipments from manufacturing industries in October. The major increase was in the transportation equipment manufacturing industries where the automotive products industries showed a 4.5 per cent gain after adjustment for seasonal variation from \$607.5 million to \$635.0 million. Shipments in the paper and allied products industries group, seasonally adjusted, were also higher in October, with an increase of \$15.2 million. These fairly substantial gains were partially offset by a decline of \$17.8 million or 2.7 per cent in the estimate of shipments in the foods and beverages industry group to the seasonally adjusted estimate of \$632.1 million.

### Inventories

Total inventory owned estimated at \$6,813.3 million, seasonally adjusted, was \$13.8 million higher than in September, with all the increase in the stocks of non-durable goods producing industries. There was little change in the total inventories owned by the durable goods producing industries, after the series had been adjusted for seasonal variation although there was an 11.6 per cent increase in the value of goods in process in the metal fabricating industries principally in inventory held but not owned. This increase in the goods-in-process portion of total inventory held was also reflected in the construction materials and components group of industries as classified by their economic use.

### Orders

The total value of new orders received in October, seasonally adjusted, was estimated at \$3,544.3 million, just over one and one half per cent lower than in September. Total backlog at the end of October at \$3,643.1 million, seasonally adjusted, was fractionally lower than a month earlier. The most significant drop was the 11.8 per cent decrease in backlog estimated from September to October for export based manufacturing industries, where the lower backlog was mainly noticeable in wood products manufacturing industries. On the other hand, new orders in the electrical products industries were 10.5 per cent higher in October than in September after adjustment for seasonal variation. Unfilled orders at the end of the month in this industry were estimated to be 2.8 per cent higher.

### Changes in the publication

Effective with this issue, substantial changes are being introduced in this publication to present the data bi-lingually and in a somewhat more convenient format for users who wish to analyse separate components of the series and month-to-month and year-to-year changes reflected by the several series. For the first time the publication contains seasonally-adjusted series for manufacturing industries by major groups, economic use group & ratios of inventories to shipments.

The table of total manufacturers' shipments by province now presents the monthly values for two full calendar years prior to the current one, plus the average monthly manufacturers' shipments in these years and for one year earlier. Also included are cumulative totals for the current year, the comparable cumulative total of the prior year and some changes expressed as percentages, such as the year-to-year change and the current month's aggregate over that for the same month in the previous year.

## SOMMAIRE DES VARIATIONS

### Expéditions

La valeur estimative, corrigée des variations saisonnières, des expéditions des fabricants de biens durables et non durables a monté d'un peu plus de 6 millions de dollars en octobre, portant la valeur estimative, après élimination des variations saisonnières, des expéditions globales de la fabrication à 3,566.0 millions de dollars. Une hausse de 4.5 p. 100, après élimination des variations saisonnières, dans la fabrication de produits automobiles a fait monter la valeur des expéditions du matériel de transport de 607.5 à 635.0 millions de dollars, soit la hausse la plus importante enregistrée. Les expéditions, les variations saisonnières éliminées, des fabricants de papier et de produits connexes ont aussi augmenté en octobre soit de 15.2 millions de dollars. Ces hausses assez importantes ont été en partie neutralisées par une baisse de 17.8 millions de dollars (2.7 p. 100) de la valeur estimative des expéditions du groupe des aliments et boissons qui est tombée à 632.1 millions de dollars (valeur estimative désaisonnalisée).

### Stocks

La valeur globale, après élimination des variations saisonnières, des stocks possédés a dépassé de 13.8 millions de dollars celle de septembre pour s'élever à un chiffre estimatif de 6,813.3 millions, toute l'augmentation se produisant dans les stocks de biens non durables. Les stocks, corrigés des variations saisonnières, possédés par les fabricants de biens durables ont peu varié, bien que les stocks de produits inachevés dans la fabrication des métaux aient augmenté de 11.6 p. 100, surtout les stocks détenus mais non possédés. Cette hausse des stocks détenus dans les produits inachevés s'est aussi traduite dans le groupe des matériaux et fournitures de construction classifiés selon leur utilité économique.

### Commandes

La valeur globale corrigée des variations saisonnières des nouvelles commandes a été estimée à 3,544.3 millions de dollars en octobre, soit une diminution d'un peu plus de 1.5 p. 100 par rapport à septembre. La valeur globale, après élimination des variations saisonnières, des commandes en carnet à la fin d'octobre, a baissé à 3,643.1 millions de dollars, soit d'une fraction. La diminution la plus importante (11.8 p. 100) de la valeur des commandes en carnet, estimée pour octobre par rapport à septembre, a été enregistrée dans les produits fabriqués aux exportations, plus particulièrement dans la fabrication des produits du bois. Par contre, les nouvelles commandes dans la fabrication des produits électriques en octobre ont dépassé de 10.5 p. 100 celles de septembre, après élimination des variations saisonnières. A la fin du mois, la hausse des commandes en carnet de ce dernier groupe a été évaluée à 2.8 p. 100.

### Modifications apportées à la publication

Débutant avec la présente livraison, des modifications importantes ont été apportées à la publication aux fins d'offrir les renseignements dans les deux langues et dans un format plus pratique pour les utilisateurs qui désirent analyser séparément les éléments de la série ainsi que les variations d'un mois à l'autre et d'une année à l'autre présentées dans les diverses séries. Pour la première fois, la publication renferme des séries corrigées des variations saisonnières pour les industries de la fabrication classifiées par groupe principal, et groupe d'utilité économique et le rapport des stocks aux expéditions.

Le tableau des expéditions globales des fabricants publié par province offre maintenant la valeur mensuelle pour les deux années civiles antérieures à l'année courante de même que la moyenne mensuelle des expéditions des fabricants pour ces années et l'année précédente. Il comprend en plus les totaux cumulatifs pour l'année courante, le total correspondant pour l'année qui précède et certaines variations exprimées en pourcentages telles que la variation d'une année à l'autre et l'agrégat du mois courant par rapport à celui du même mois de l'année antérieure.

Tables 2, 3 and 4 contain data both before adjustment for seasonal variation and seasonally adjusted by months, for two years. Year-to-date cumulative figures of shipments for the current and prior years are shown in absolute values and with the percent of change. Percentage changes are published for the unadjusted figures for the current month over the prior month and for the current month over the same month a year earlier. Availability of seasonally adjusted data by the component series should facilitate analysis of current trends of manufacturing activity. The data includes the current month-to-month change expressed as a percentage as well as the months of cyclical dominance for all series.

Seasonally-adjusted series used for the Canada totals are the aggregates of the series by major groups. Aggregates of the data as classified by the economic use groups are adjusted independently for seasonal variation and may not add to the total published in table 2. It is hoped that these series which were published for the first time since 1962 in the July 1968 issue will prove to be useful analytical tools in assessing the influence of demand factors on different industries.

The tables of selected individual industries have been expanded to show shipments, orders and inventory data for 87 industries and industry groupings as compared with similar detail for 75 selected industries and industry groupings in previous issues. The former presentation of 13 months of data has been changed to show three months' consecutive data for the current year with data for the comparable three months of the prior year, along with cumulative figures for shipments for the calendar year up to the month of reference for the current and prior years. There has been some regrouping of inventory data to show raw materials separately as far as possible. Where this has been possible, users will be able to adjust shipments by the change in the opening and closing inventories of goods-in-process and finished products to arrive at a measure of the dollar value of production.

The ratios of total inventories owned to shipments and finished products inventories to shipments are now based on seasonally adjusted data only, in the belief that this will provide a more readily usable measure of economic activity. Users who may wish to continue this series as previously published without adjustment for seasonal variation may do so quite readily by developing conceptually similar ratios from the unadjusted series in tables 2, 3 and 4.

The final table cross-indexes the standard industrial classification with the economic use classifications to show the major group and economic use group to which each industry in the 1960 Standard Industrial Classification has been allotted.

The chart is now developed from seasonally adjusted data only and shows a number of relationships not previously depicted such as the month-to-month movements of some of the components of the aggregates, movements of the inventory/shipments ratios and the several economic use classifications.

Les tableaux 2, 3 et 4 présentent les données avant l'élimination des variations saisonnières et les données corrigées des variations saisonnières pour chaque mois et pour deux années. La valeur des expéditions depuis janvier jusqu'au mois observé et des années antérieures est exprimée en valeur absolue et en variation pourcentuelle. Les variations pourcentuelles sont publiées pour les chiffres non rectifiés du mois par rapport au mois précédent ainsi que pour le mois par rapport au même mois de l'année précédente. Nul doute que le fait de disposer de données corrigées des variations saisonnières pour la série des éléments facilitera l'analyse des variations actuelles dans la fabrication. Les données comportent la variation d'un mois à l'autre exprimée en pourcentage tout comme les mois de dominance cyclique pour toutes les séries.

Les séries, corrigées des variations saisonnières, qu'on a utilisées pour les totaux du Canada sont les agrégats des séries par groupes principaux. Les agrégats tels que classifiés par groupe d'utilité économique sont rectifiés séparément pour la variation saisonnière et peuvent ne pas correspondre au total donné au tableau 2. On espère que ces séries publiées pour la première fois depuis 1962 dans la livraison de juillet 1968 constitueront des instruments d'analyse utiles en ce qui concerne l'influence des facteurs de la demande sur diverses industries.

Les tableaux de certaines industries ont été élargis pour montrer les données des expéditions, des commandes et des stocks de 87 industries et groupes d'industries en comparaison des 75 industries et groupes d'industries publiés dans les livraisons antérieures. L'ancienne formule qui consistait à présenter les données pour 13 mois a été abolie. À l'avenir, les données publiées montreront trois mois consécutifs de l'année courante et les mêmes mois de l'année précédente. Elles se rapporteront aussi aux chiffres relatifs aux expéditions depuis janvier jusqu'au mois observé de l'année civile courante et de l'année antérieure. Les chiffres des stocks ont subi un certain regroupement en vue de produire dans la mesure du possible des données distinctes pour les matières premières. De ce fait, les utilisateurs pourront rectifier les expéditions par la variation entre les stocks du début et de la fin de l'exercice de produits inachevés et de produits finis pour obtenir une mesure de la valeur en dollars de la production.

Les rapports des stocks globaux possédés aux expéditions et des stocks de produits finis aux expéditions ne sont maintenant fondés que sur des données corrigées des variations saisonnières avec l'assurance qu'ainsi il en ressortira une mesure de l'activité économique plus facilement utilisable. Les utilisateurs qui préfèrent l'ancienne série de données non corrigées des variations saisonnières peuvent continuer à s'en servir en créant des rapports semblables des séries non corrigées données aux tableaux 2, 3 et 4.

Dans le dernier tableau la Classification Type des Industries est recoupée avec les classifications de l'utilité économique pour indiquer le groupe principal et le groupe d'utilité économique dans lesquels chaque industrie énumérée dans la Classification Type des Industries (1960) a été classée.

Le tableau est désormais établi uniquement à partir des données désaisonnalisées et il met en évidence un certain nombre de relations qui n'étaient pas données antérieurement comme, par exemple, les fluctuations mensuelles de certains éléments des agrégats, les fluctuations des rapports stocks/expéditions et les classifications de l'utilité économique.

## CONCEPTS AND METHODS

Inventories, shipments and orders values in this publication are monthly projections of annual census of manufactures values based on returns from a representative sample of manufacturing establishments. The July 1968 data are the first to be based on the 1965 census. Values for years prior to and including 1965 are derived directly from the census and the aggregate of monthly shipments in those years should equal published census values. Because the monthly values subsequent to 1965 are projections, these totals are subject to adjustment when more recent census data become available. Year end inventory values published here are for December and differ from year end census values to the extent that fiscal year census reports show inventory values at dates other than December 31. Unfilled orders on books are published for industries where orders are part of the accounting records.

Monthly reports are sought from establishments whose shipments in total represent about 75 per cent of the aggregate shipments in each industry. For adequate estimation of total shipments by province, the sample is further strengthened by reports from representative establishments in each industry in each province. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combination reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. About two-thirds of the 8,000 firms now included in the sample report inventory values and about one-third report orders.

The estimates of shipments are calculated each month by multiplying the sum of the values in the current sample in each industry in each province by the ratio of similarly defined census aggregates to the sum of the values reported by the sample in the census year. Ratios of calculated December 31 values in the census year to the sum of the sample values of the same date are derived for inventories by component (i.e. raw materials and components, goods in process and finished products) and for unfilled orders. These ratios are applied to the current sample aggregates of the same items.

Inventory values are published for both total inventory owned and total inventory held by establishments. The difference between these values is the amount of inventory financed by progress payments as work proceeds on goods being produced. Because some goods are held as in-progress inventory for a considerable time the book value of manufacturers' inventory may build up. To the extent that this has been covered by payments received, it will be higher than the manufacturers' investment in inventory. Both the amount of the manufacturers' investment in inventories and the amount of inventory held by manufacturers are of economic interest. It is also useful for derivation of production values in many industries and for other economic studies to measure the value of inventory held by the degree of fabrication that has taken place. Consequently firms are asked to report their stocks and estimates are made of the values by level of fabrication: raw materials and components, goods in progress and finished products.

Most establishments that maintain orders books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No

## CONCEPTS ET MÉTHODES

Les valeurs des stocks, des expéditions et des commandes qui figurent dans la présente publication sont des extrapolations mensuelles des valeurs du recensement annuel des manufactures établies à partir des déclarations d'un échantillon représentatif des établissements manufacturiers. Les données sur juillet 1968 sont les premières qui soient fondées sur le recensement de 1965. Les valeurs pour les années jusqu'à 1965 inclusivement découlent directement du recensement, et la somme des expéditions mensuelles de ces années devrait équivaloir aux résultats publiés du recensement. Vu que les valeurs mensuelles postérieures à 1965 sont des extrapolations, elles pourront être rectifiées lorsqu'on disposera de données de recensement plus récentes. Les valeurs des stocks de fin d'année publiées ici sont celles de décembre, et diffèrent de celles du recensement de fin d'exercice dans la mesure où les déclarations pour le recensement de l'exercice financier donnent la valeur des stocks à d'autres dates que le 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité comprend les commandes.

On demande des déclarations mensuelles aux établissements dont les expéditions totales représentent environ 75% de l'ensemble des expéditions de chaque industrie. Afin d'obtenir une juste évaluation des expéditions totales par province, on renforce l'échantillon en obtenant des déclarations d'établissements représentatifs de chaque industrie, dans chaque province. Cet échantillon est révisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, le Bureau accepte des rapports combinés des sociétés ayant plus d'un établissement et des estimations des valeurs courantes des établissements dont les stocks et les commandes en carnets ne sont pas recensés à la fin de chaque exercice comptable. Les deux-tiers environ des 8,000 sociétés actuellement comprises dans l'échantillon déclarent la valeur des stocks et environ un tiers, celle des commandes.

L'estimation mensuelle des expéditions est le produit de la multiplication de la somme des chiffres recueillis sur chaque industrie et pour chaque province lors de l'échantillon régulier, par le rapport des agrégats du recensement des mêmes industries aux chiffres des échantillons mensuels exécutés au cours de l'année du recensement. Les rapports des valeurs calculées au 31 décembre de l'année du recensement à la somme des valeurs de l'échantillon à la même date sont calculés pour les stocks par élément, c'est-à-dire, les matières premières et éléments, les marchandises en voie de transformation et les produits finis, et pour les commandes en carnet. Ces rapports sont appliqués aux agrégats courants de l'échantillon des mêmes articles.

On publie la valeur des stocks propres globaux et des stocks globaux détenus par les établissements. La différence entre ces deux montants est le volume des stocks financés par des acomptes versés au cours de la fabrication des produits. Vu que certains articles sont détenus pendant un temps considérable comme produits en cours de fabrication, la valeur comptable des stocks des fabricants peut s'accroître et, dans la mesure où ces produits sont couverts par des acomptes, dépasser les sommes immobilisées en stocks par les fabricants. Le montant de l'investissement en stocks et le volume des stocks détenus par les fabricants présentent tous deux un intérêt économique. En vue d'établir la valeur de la production dans de nombreuses industries, et pour d'autres études économiques, il est également nécessaire d'évaluer les stocks détenus suivant le degré de fabrication atteint. On demande donc aux sociétés de déclarer leurs stocks, et l'estimation des valeurs se fait par degré de fabrication: matières premières et éléments, marchandises en voie de transformation et produits finis.

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercice comptable. Lors de l'enquête, nous demandons cette valeur, qui est désignée comme étant les commandes reçues mais non encore considérées comme des ventes, que des travaux aient été effectués ou non à leur égard ou

estimate of this value is made for those industries where orders are customarily filled as received from stocks on hand and orders books are, therefore, not generally maintained.

New orders are calculated to provide an indication of the rate at which new business is being received. The series, which is of considerable interest to economists and marketing people, is derived by adjusting current shipments by the changes between the opening and closing backlogs.

Because a constant sample is used between census revisions, values must be estimated for each establishment when response has not been received at compilation time. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. Values received currently for months earlier than that for which revised figures have been published are used when all series are adjusted to new census benchmarks.

At the time of adjustments to census benchmarks, there may be substantial changes in the series. These may be caused by changes in the industrial classification of firms when their activity has been analysed for census purposes after preliminary estimates of industry totals have been made for this series; by inclusion of month-by-month responses received too late for use in calculating preliminary or revised data and by changes in accounting and, therefore, reporting methods by multi-establishment companies.

Definitions, classifications and groupings are taken from the census of manufactures.

que les stocks existants puissent servir à les exécuter. Cette valeur n'est pas estimée dans le cas des industries où, d'ordinaire, on remplit les commandes dès réception à même les stocks et où, par conséquent, on ne tient pas de carnets de commandes.

On évalue les nouvelles commandes afin de fournir une indication du rythme d'arrivée des nouvelles affaires. Cette série, qui présente un immense intérêt aux économistes et aux spécialistes de la commercialisation est établie en rectifiant les expéditions courantes d'après les changements survenus dans les commandes en carnet entre le début et la fin de l'exercice.

Etant donné qu'un échantillon constant est utilisé entre les révisions censitaires fondées sur les recensements, il faut estimer la valeur pour chaque établissement dont on n'a pas reçu la déclaration au moment de la compilation des données. Le calcul des estimations révisées relatives au mois précédent et des estimations provisoires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Les données reçues pour les mois antérieurs à celui pour lequel on a publié les chiffres rectifiés sont utilisées lorsque toutes les séries sont rectifiées suivant les nouvelles données de référence du recensement.

Les séries peuvent subir des modifications importantes lors de la rectification fondée sur les données de référence du recensement. Ces modifications peuvent être causées par des changements dans la classification industrielle des sociétés suite d'une étude de leurs activités aux fins du recensement, faite après l'estimation des totaux provisoires pour les industries comprises dans la série en cause, par l'inclusion des déclarations mensuelles reçues trop tard pour être utilisées dans le calcul des données provisoires ou rectifiées et par des changements apportés à la comptabilité et, par conséquent, au mode de déclaration des sociétés à établissements multiples.

Les définitions, la classification et la répartition par groupes sont celles du Recensement des manufactures.

# MANUFACTURERS' SHIPMENTS, INVENTORIES AND ORDERS, 1963-68 LES EXPÉDITIONS, LES STOCKS ET LES COMMANDES DES FABRICANTS, 1963-1968 (SEASONALLY ADJUSTED—CHIFFRES DÉSAISONNALISÉS)

## TREND SUMMARY

### Shipments

Seasonally-adjusted shipment figures for total manufacturing in Canada showed a slight downward trend in November and December, ending the four-month rise which began in July. Revised seasonally-adjusted figures for November were down 1.2% from comparable October figures, bringing the seasonally-adjusted total shipments from the October level of \$3,578.0 million to \$3,533.8 million in November. A further decline of 1.9% in December over November brought the seasonally-adjusted preliminary estimate for December down to \$3,468.2 million.

While non-durable goods industries showed slight gains over the two-month period (seasonally-adjusted November figures showing \$1,873.8 millions, up 1.4% from the October figure of \$1,848.4 million, and a further rise of 1.2% in December over November leading to a preliminary December figure, seasonally-adjusted, of \$1,896.6 million), these gains were more than offset by declines in durable goods industries. Durable industries' shipments in December, seasonally adjusted at \$1,571.6 million, were down 5.3% from the comparable November value of \$1,660.0 million, which in turn was down 4.0% from the October figure of \$1,729.6 million. Leading this downward trend were the Transportation Equipment industries which registered a decline in November, as compared with October, of 16.8% and a further decline in December, as compared with November, of 10.6%. This brought the seasonally-adjusted total shipments for this industry group down from \$586.8 million in October to \$488.3 million in November, and to \$436.4 million in December.

The seasonally-adjusted November total shipments were 8.7% higher than comparable figures for November 1967 and December 1968 figures were 4.0% higher than their counterpart in 1967.

### New orders

New orders in Canadian manufacturing industry, when adjusted for seasonal variations, fell almost negligibly from the October figure of \$3,581.3 million to the November figure of \$3,576.9 million, a decline of 0.1%. The decline to \$3,468.1 million in the preliminary seasonally-adjusted estimate for December was more substantial, representing 3.0% of the November figure.

In both months, increases in new orders of non-durable goods industries were offset by more-than-seasonal declines in new orders received by durable goods producers. Non-durable goods industries, when seasonally adjusted, rose by 1.6% in November from the October figure of \$1,854.6 million, giving a November total new orders figure of \$1,885.1 million. This was countered by a 2.0% decline in durable goods industries from \$1,726.7 million in October to \$1,691.8 million in November, again seasonally-adjusted. In December new orders received by non-durable industries edged up by 0.2% to a seasonally-adjusted level of \$1,889.5 million, while durable industries suffered a drop of 6.7% to an estimated \$1,578.6 million.

New orders in the Transportation Equipment industries declined by 11.9% from a seasonally-adjusted October figure of \$552.8 million to a November figure of \$486.8 million, then by a further 13.0% to a December figure of \$423.7 million. Primary Metals industries countered a 7.9% increase in November over October with a 26.2% decline in December over November, to arrive at a seasonally-adjusted December figure of \$228.0 million.

## RÉSUMÉ DES TENDANCES

### Expéditions

Les chiffres des expéditions globales des industries manufacturières, après correction des variations saisonnières, font apparaître une légère tendance à la baisse en novembre et en décembre, qui met fin à une période d'accroissement de quatre mois commencée en juillet. Les expéditions de novembre sont de 1.2 p. 100 inférieures à celles d'octobre (après rectification et désaisonnalisation); ainsi, la valeur globale des expéditions tombe de 3,578.0 million de dollars en octobre à 3,533.8 millions de dollars en novembre. Les expéditions ont encore diminué de 1.9 p. 100 de novembre à décembre et les estimations préliminaires pour décembre (désaisonnalisées) sont de 3,468.2 millions de dollars.

L'industrie des biens non durables a marqué de légers progrès durant les deux mois observés: la valeur des expéditions de novembre (chiffre désaisonnalisé) est de 1,873.8 millions de dollars, soit 1.4 p. 100 de plus qu'en octobre, (1,848.4 millions de dollars) et il y a eu un autre accroissement (de 1.2 p. 100) en décembre, mois pour lequel l'estimation préliminaire se monte, après correction des variations saisonnières, à 1,896.6 millions de dollars. Ces accroissements ont été largement compensés par les baisses qui ont eu lieu dans le secteur des biens durables. Les expéditions de biens durables, dont la valeur désaisonnalisée est de 1,571.6 millions de dollars en décembre, sont de 5.3 p. 100 inférieures à celles de novembre (1,660.0 millions de dollars). Le chiffre de novembre est lui-même de 4.0 p. 100 de moins que celui d'octobre (1,729.0 millions). Parmi les secteurs en tête de la baisse on trouve l'industrie du matériel de transport qui a enregistré en novembre une baisse de 16.8 p. 100 par rapport à octobre, puis une deuxième baisse de 10.6 p. 100 en décembre. Ainsi, le chiffre désaisonnalisé des expéditions de ce groupe industriel est tombé de 586.8 millions de dollars à 488.3 millions entre octobre et novembre et à 436.4 millions en décembre.

Le chiffre désaisonnalisé des expéditions globales de novembre est de 8.7 p. 100 supérieur à celui de novembre 1967 et, de décembre 1967 à décembre 1968, l'accroissement est de 4.0 p. 100.

### Nouvelles commandes

La diminution des commandes reçues par les industries manufacturières entre octobre (3,581.3 millions de dollars) et novembre (3,576.9 millions) a été presque négligeable (0.1 p. 100). L'estimation préliminaire désaisonnalisée de décembre (3,468.1 millions de dollars) représente une diminution plus importante qui atteint 3.0 p. 100 du chiffre de novembre.

Au cours des deux mois, l'augmentation des commandes de biens non durables a été largement absorbée par des baisses, supérieures aux baisses saisonnières normales, des commandes dans le secteur des biens durables. Le chiffre désaisonnalisé des commandes dans l'industrie des biens non durables a augmenté de 1.6 p. 100 en novembre, passant de 1,854.6 millions de dollars à 1,885.1 millions. Cette augmentation a été neutralisée par une baisse de 2.0 p. 100 des commandes de biens durables, qui sont tombées de 1,726.7 millions de dollars à 1,691.8 millions entre octobre et novembre (chiffres désaisonnalisés). En décembre, les commandes de biens non durables ont marqué une légère hausse de 0.2 p. 100, atteignant 1,889.5 millions de dollars, tandis que celles de biens durables accusaient une régression de 6.7 p. 100, tombant à 1,578.6 millions de dollars.

Dans l'industrie du matériel de transport, la baisse des commandes a été de 11.9 p. 100 en novembre (552.8 millions de dollars en octobre et 486.8 millions en novembre, chiffres désaisonnalisés); elle s'est encore accentuée de 13.0 p. 100 en décembre, les commandes étant tombées ce mois-là à 423.7 millions de dollars. Dans l'industrie des formes primaires des métaux, l'augmentation de 7.9 p. 100 enregistrée en novembre a été éclipsée par une diminution de 26.2 p. 100 en décembre, la valeur désaisonnalisée des commandes de décembre ayant été de 228.0 millions de dollars.

### Unfilled orders

Unfilled orders in total manufacturing, when adjusted for seasonal variation, stood at \$3,701.1 million at the end of December, up 1.2% from the October figure of \$3,658.1 million and virtually unchanged from the November figure of \$3,701.2 million.

Orders remaining unfilled at the end of November in non-durable goods industries were up 2.2% from the seasonally-adjusted October figure of \$508.7 million to \$520.0 million while the backlog in durable goods industries registered an estimated \$3,181.2 million at the end of November, up 1.0% from the October figure of \$3,149.4 million. A decline of 1.4% to \$512.9 million in the seasonally-adjusted non-durable industries' December figures was virtually matched by a 0.2% rise in the durable figures to \$3,188.2 million.

### Inventories

Total owned inventories at the end of November, adjusted for seasonal variations, were \$6,795.2 million, down 0.6% from the October figure of \$6,832.9 million. As inventories owned in durable goods industries remained unchanged at \$3,293.8 million, the change in total manufacturing figures was completely reflected in the 1.1% decline of non-durable inventories to \$3,501.4 million at the end of November from the October-end figure of \$3,539.1 million. Both sectors registered slightly lower stocks of raw materials and slightly higher stocks of goods in process, and the 0.9% decline of finished products on hand in the non-durable sector more than compensated for the 0.5% rise in durable finished products.

December-end total owned inventories were 0.8% higher than November, standing at \$6,849.7 million. This resulted from marginal increases in all three inventory components in both durable and non-durable goods producing industries.

### Commandes en carnet

La valeur désaisonnalisée des commandes en carnet pour l'ensemble de la fabrication atteignait 3,701.1 millions de dollars à la fin de décembre, soit une augmentation de 1.2 p. 100 par rapport au chiffre d'octobre, qui était de 3,658.1 millions. Il n'y a pratiquement aucun changement par rapport à novembre (3,701.2 millions de dollars).

À la fin de novembre, dans le secteur des biens non durables, la valeur des commandes en carnet (520.0 millions de dollars) était de 2.2 p. 100 supérieure au chiffre désaisonnalisé d'octobre (508.7 millions) tandis que dans le secteur des biens durables la valeur estimée des commandes en carnet à la fin de novembre atteignait 3,181.2 millions, soit 1.0 p. 100 de plus qu'en octobre (3,149.4 millions). La baisse en décembre de 1.4 p. 100 du chiffre désaisonnalisé des commandes en carnet de l'industrie des biens non durables, qui est tombé à 512.9 millions de dollars, a été pratiquement compensée par une augmentation de 0.2 p. 100 des commandes en carnet des biens durables, qui sont passées à 3,188.2 millions de dollars.

### Stocks

La valeur totale des stocks des fabricants (après correction des variations saisonnières) atteignait à la fin de novembre 6,795.2 millions de dollars, soit 0.6 p. 100 de moins qu'en octobre (6,832.9 millions de dollars). Alors que la valeur des stocks de l'industrie des biens durables (3,293.8 millions de dollars) reste inchangée, la différence pour l'ensemble des industries manufacturières provient de la baisse de 1.1 p. 100 des stocks de biens non durables, qui sont passés de 3,539.1 millions de dollars à 3,501.4 millions entre la fin d'octobre et la fin de novembre. Dans les deux secteurs, on enregistre une faible diminution des stocks de matières premières et une légère augmentation des stocks de produits en cours de fabrication; par ailleurs, la baisse de 0.9 p. 100 des produits finis en stock dans le secteur des biens non durables a largement compensé l'augmentation de 0.5 p. 100 des stocks de produits finis du secteur des biens durables.

La valeur totale des stocks des fabricants à la fin de décembre était de 6,849.7 millions de dollars, soit 0.8 p. 100 de plus qu'à la fin de novembre. Cette hausse est le résultat d'une faible augmentation des trois éléments constituant les stocks des industries de biens durables et de biens non durables.

## CONCEPTS AND METHODS

Inventories, shipments and orders values in this publication are monthly projections of annual census of manufactures values based on returns from a representative sample of manufacturing establishments. The July 1968 data are the first to be based on the 1965 census. Values for years prior to and including 1965 are derived directly from the census and the aggregate of monthly shipments in those years should equal published census values. Because the monthly values subsequent to 1965 are projections, these totals are subject to adjustment when more recent census data become available. Year end inventory values published here are for December and differ from year end census values to the extent that fiscal year census reports show inventory values at dates other than December 31. Unfilled orders on books are published for industries where orders are part of the accounting records.

Monthly reports are sought from establishments whose shipments in total represent about 75 per cent of the aggregate shipments in each industry. For adequate estimation of total shipments by province, the sample is further strengthened by reports from representative establishments in each industry in each province. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combination reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. About two-thirds of the 8,000 firms now included in the sample report inventory values and about one-third report orders.

The estimates of shipments are calculated each month by multiplying the sum of the values in the current sample in each industry in each province by the ratio of similarly defined census aggregates to the sum of the values reported by the sample in the census year. Ratios of calculated December 31 values in the census year to the sum of the sample values of the same date are derived for inventories by component (i.e. raw materials and components, goods in process and finished products) and for unfilled orders. These ratios are applied to the current sample aggregates of the same items.

Inventory values are published for both total inventory owned and total inventory held by establishments. The difference between these values is the amount of inventory financed by progress payments as work proceeds on goods being produced. Because some goods are held as in-progress inventory for a considerable time the book value of manufacturers' inventory may build up. To the extent that this has been covered by payments received, it will be higher than the manufacturers' investment in inventory. Both the amount of the manufacturers' investment in inventories and the amount of inventory held by manufacturers are of economic interest. It is also useful for derivation of production values in many industries and for other economic studies to measure the value of inventory held by the degree of fabrication that has taken place. Consequently firms are asked to report their stocks and estimates are made of the values by level of fabrication: raw materials and components, goods in progress and finished products.

Most establishments that maintain orders books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No

## CONCEPTS ET MÉTHODES

Les valeurs des stocks, des expéditions et des commandes qui figurent dans la présente publication sont des extrapolations mensuelles des valeurs du recensement annuel des manufactures établies à partir des déclarations d'un échantillon représentatif des établissements manufacturiers. Les données sur juillet 1968 sont les premières qui soient fondées sur le recensement de 1965. Les valeurs pour les années jusqu'à 1965 inclusivement découlent directement du recensement, et la somme des expéditions mensuelles de ces années devrait équivaloir aux résultats publiés du recensement. Vu que les valeurs mensuelles postérieures à 1965 sont des extrapolations, elles pourront être rectifiées lorsqu'on disposera de données de recensement plus récentes. Les valeurs des stocks de fin d'année publiées ici sont celles de décembre, et diffèrent de celles du recensement de fin d'exercice dans la mesure où les déclarations pour le recensement de l'exercice financier donnent la valeur des stocks à d'autres dates que le 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité comprend les commandes.

On demande des déclarations mensuelles aux établissements dont les expéditions totales représentent environ 75% de l'ensemble des expéditions de chaque industrie. Afin d'obtenir une juste évaluation des expéditions totales par province, on renforce l'échantillon en obtenant des déclarations d'établissements représentatifs de chaque industrie, dans chaque province. Cet échantillon est révisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, le Bureau accepte des rapports combinés des sociétés ayant plus d'un établissement et des estimations des valeurs courantes des établissements dont les stocks et les commandes en carnets ne sont pas recensés à la fin de chaque exercice comptable. Les deux-tiers environ des 8,000 sociétés actuellement comprises dans l'échantillon déclarent la valeur des stocks et environ un tiers, celle des commandes.

L'estimation mensuelle des expéditions est le produit de la multiplication de la somme des chiffres recueillis sur chaque industrie et pour chaque province lors de l'échantillon régulier, par le rapport des agrégats du recensement des mêmes industries aux chiffres des échantillons mensuels exécutés au cours de l'année du recensement. Les rapports des valeurs aculées au 31 décembre de l'année du recensement à la somme des valeurs de l'échantillon à la même date sont calculés pour les stocks par élément, c'est-à-dire, les matières premières et éléments, les marchandises en voie de transformation et les produits finis, et pour les commandes en carnet. Ces rapports sont appliqués aux agrégats courants de l'échantillon des mêmes articles.

On publie la valeur des stocks propres globaux et des stocks globaux détenus par les établissements. La différence entre ces deux montants est le volume des stocks financés par des acomptes versés au cours de la fabrication des produits. Vu que certains articles sont détenus pendant un temps considérable comme produits en cours de fabrication, la valeur comptable des stocks des fabricants peut s'accroître et, dans la mesure où ces produits sont couverts par des acomptes, dépasser les sommes immobilisées en stocks par les fabricants. Le montant de l'investissement en stocks et le volume des stocks détenus par les fabricants présentent tous deux un intérêt économique. En vue d'établir la valeur de la production dans de nombreuses industries, et pour d'autres études économiques, il est également nécessaire d'évaluer les stocks détenus suivant le degré de fabrication atteint. On demande donc aux sociétés de déclarer leurs stocks, et l'estimation des valeurs se fait par degré de fabrication: matières premières et éléments, marchandises en voie de transformation et produits finis.

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercice comptable. Lors de l'enquête, nous demandons cette valeur, qui est désignée comme étant les commandes reçues mais non encore considérées comme des ventes, que des travaux aient été effectués ou non à leur égard ou

estimate of this value is made for those industries where orders are customarily filled as received from stocks on hand and orders books are, therefore, not generally maintained.

New orders are calculated to provide an indication of the rate at which new business is being received. The series, which is of considerable interest to economists and marketing people, is derived by adjusting current shipments by the changes between the opening and closing backlogs.

Because a constant sample is used between census revisions, values must be estimated for each establishment when response has not been received at compilation time. Calculation of revised estimates for the immediately prior month in conjunction with preliminary estimates for the current month permits use of values reported too late for the first compilation. Values received currently for months earlier than that for which revised figures have been published are used when all series are adjusted to new census benchmarks.

At the time of adjustments to census benchmarks, there may be substantial changes in the series. These may be caused by changes in the industrial classification of firms when their activity has been analysed for census purposes after preliminary estimates of industry totals have been made for this series; by inclusion of month-by-month responses received too late for use in calculating preliminary or revised data and by changes in accounting and, therefore, reporting methods by multi-establishment companies.

Definitions, classifications and groupings are taken from the census of manufactures.

que les stocks existants puissent servir à les exécuter. Cette valeur n'est pas estimée dans le cas des industries où, d'ordinaire, on remplit les commandes dès réception à même les stocks et où, par conséquent, on ne tient pas de carnets de commandes.

On évalue les nouvelles commandes afin de fournir une indication du rythme d'arrivée des nouvelles affaires. Cette série, qui présente un immense intérêt aux économistes et aux spécialistes de la commercialisation est établie en rectifiant les expéditions courantes d'après les changements survenus dans les commandes en carnet entre le début et la fin de l'exercice.

Etant donné qu'un échantillon constant est utilisé entre les révisions censitaires fondées sur les recensements, il faut estimer la valeur pour chaque établissement dont on n'a pas reçu la déclaration au moment de la compilation des données. Le calcul des estimations révisées relatives au mois précédent et des estimations provisoires pour le mois observé permet d'utiliser les données déclarées trop tard pour la première compilation. Les données reçues pour les mois antérieurs à celui pour lequel on a publié les chiffres rectifiés sont utilisées lorsque toutes les séries sont rectifiées suivant les nouvelles données de référence du recensement.

Les séries peuvent subir des modifications importantes lors de la rectification fondée sur les données de référence du recensement. Ces modifications peuvent être causées par des changements dans la classification industrielle des sociétés suite d'une étude de leurs activités aux fins du recensement, faite après l'estimation des totaux provisoires pour les industries comprises dans la série en cause, par l'inclusion des déclarations mensuelles reçues trop tard pour être utilisées dans le calcul des données provisoires ou rectifiées et par des changements apportés à la comptabilité et, par conséquent, au mode de déclaration des sociétés à établissements multiples.

Les définitions, la classification et la répartition par groupes sont celles du Recensement des manufactures.

FOOTNOTESTABLE 1

- (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3

- (1) The value of Unfilled Orders and therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.
- (2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

Note: Figures may not add due to rounding.

TABLE 4

- (1) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with total inventory held; for all practical purposes this can be considered the equivalent of inventory owned.

Note: Figures may not add due to rounding.

SYMBOLS

The following standard symbols are used in Dominion Bureau of Statistics publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- <sup>p</sup> preliminary figures.
- <sup>r</sup> revised figures.

RENVOISTABEAU 1

- (1) L'Île-du-Prince Édouard, le Yukon et les Territoires du Nord-Ouest ne sont pas publiés séparément; ils sont inclus dans le total pour le Canada.

TABEAU 3

- (1) Pour ce qui est des industries comprises dans les groupes 1, 2, 6, 8, 9, 10, 17, 18 et 19, la valeur des commandes en carnet et, par conséquent, celle des nouvelles commandes est faible. La portée restreinte de l'échantillon ne permet pas de faire des estimations distinctes dans ces deux cas.
- (2) La valeur des stocks détenus mais non possédés de ce groupe est très faible et la portée restreinte de l'échantillon ne permet pas de fournir des données distinctes. Les estimations visant ce genre de stocks sont comprises dans l'ensemble des stocks détenus; en pratique, on peut considérer ce poste comme l'équivalent des stocks possédés.

Nota: Les chiffres ne totalisent peut-être pas en raison de l'arrondissement.

TABEAU 4

- (1) La valeur des stocks détenus mais non possédés de ce groupe est très faible et la portée restreinte de l'échantillon ne permet pas de fournir des données distinctes. Les estimations visant ce genre de stocks sont comprises dans l'ensemble des stocks détenus; en pratique, on peut considérer ce poste comme l'équivalent des stocks possédés.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications du Bureau fédéral de la statistique:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes.
- <sup>p</sup> nombres provisoires.
- <sup>r</sup> nombres rectifiés.
